

SAN HUMBERTO

Business Case of the Project

Submit Date:

September 13, 2016

Requestor Info:

Juan Carlos Urquiza Roiz

Project Title:

San Humberto Monitoring System

Requestor's Due Date:

October 24, 2016

Business Objective:

As the number of calves grow in the ranch it is harder to keep track of the current situation of every one of them. The main objective would be to have a clear track of the calves' information in a web system instead of doing it on paper.

Business Requirements:

The current process is to register by hand all the data about the calf and then register it on a word document that has to be updated every time the calf suffers a change. The change would include an automatized system to register weight, gained weight, birth date, etc. on the field and directly to the system instead of writing it on a paper and then pass it to a word document. It would also include a report system to view graphically the calf's information.

Business Impact:

By not implementing this system it would be almost impossible to keep a proper track of the calves' needs such as vaccines, diets or special treatment.

Budget Information:

This project would only need the monthly server payment to keep it running.

Impacted Application / Product:

There is no current application being used, simple word documents to register the information of each calf.

Special Instructions/New Hardware:

The main focus of the project is not the registering module but the reports module. This is the one that will have a huge impact on the tracking method.
